

Aurora RM

Reliable moisture measurement

Panametrics Aurora RM rack-mount analyzer uses tunable diode laser absorption spectroscopy (TDLAS) to accurately measure moisture in a variety of background gases. The Aurora RM analyzer is suitable for installation in safe areas and operates over a wide range of environmental conditions. Aurora RM's fast response immediately alerts the user when moisture concentrations are out of compliance; once corrected, gas can be quickly cleared for process normalization.

The Aurora RM analyzers have an intuitive interface that makes them easy to learn, configure and operate. With a local service team to support them, you have the confidence of knowing that Aurora RM analyzers are always ready for immediate moisture measurement. With power and gas lines easily connected, the Aurora RM moisture analyzer provides a wide range of reliable measurements with the accuracy and fast response you need for immediate alerts to process upsets or out-of-compliance moisture concentrations.
